.Net Core and Angular Developer

Description

The Company:

Occicor is an innovative and fast-growing Artificial Intelligence company that helps CPG companies to achieve a “better shelf management by transforming images into actionable data” using our software of Image Recognition powered with Artificial Intelligence.

We are looking for a professional .Net Core and Angular Developer who will be responsible for the development and maintenance of our backend projects and APIs that are powering our mobile and Web applications. The primary focus will be the development, maintenance, and improvement of our image Processing API application. Our engineers collaborate with each other to work on different layers of the infrastructure. Therefore, commitment to collaborative problem solving, sophisticated design, and quality product is essential.

The Candidate:

The ideal candidate is a self-motivated, multi-tasker, and demonstrated team-player. You will be responsible for the development of new software products and enhancements to existing products. You should excel in working with large-scale applications and frameworks and have outstanding communication and leadership skills.

Responsibilities

- Taking part in full software development lifecycle activities for software solutions
- Develop high quality software design
- Develop applications by producing clean and efficient code
- The work includes requirement analysis (if required), development, unit/integration testing and bug fixing as well as documentation
- Adding new functionality to the current product
- Upgrading current product features with respect to technology and customer requirements,
- Optimization and maintenance of current features,
- Developing new products
- Development in agile team
